## Enlighted Advanced Lighting Controls

Enlighted drives down lighting installation and building energy costs, improves occupant comfort, and brings the Internet of Things to buildings.

## Enlighted Advanced Sensors

**Smart.** Enlighted transforms light fixtures into wireless IoT-enabled building intelligence solutions. Measuring temperature, light, energy consumption, and motion, along with Bluetooth capabilities, Enlighted sensors continuously capture robust real-time data in the building.

**Responsive.** Our sensors control lighting based on customized profiles, then capture and respond to data indicating changes in occupancy and ambient light levels. They maintain programmed behavior even if outages affect network health.

**Simple.** Enlighted sensors are compact, and easy to install. Our sensors aren't just beautiful, they're practical — delivering better occupant experiences, with lower installation and energy costs.

**Scalable.** Enlighted's technology was designed from the ground up to be fully scalable, and has been proven in installations from small office buildings to huge multi-million-square-foot factories, and beyond.

**Future-Proof.** Our system is software upgradeable, enabling future intelligent applications to be created, and allowing it to adapt to changes in specifications and building codes.

## Ideal Indoor Lighting

**Productive.** Task-specific lighting and lighting scenes, paired with color temperature tuning, to create ideal work spaces.

**Intelligent.** Lighting intensity is automatically adjusted, guaranteeing occupant comfort.

**Energy Efficient.** Daylight harvesting and vacancy detection contributes additional energy savings to already-efficient LED lighting.

## Lighting Control

The Enlighted IoT platform includes the most advanced lighting control system in the world. Features like individual task and color temperature tuning let users enjoy ideal lighting conditions, while continuous occupancy monitoring and daylight harvesting dramatically reduce energy costs.

### Capabilities

**Daylight Harvesting.** Enlighted smart sensors adjust ambient light levels to save energy by taking advantage of available daylight. Sensors may be grouped together, ensuring a uniform light level for a harmonious visual experience.

**Task Tuning.** Settings can be programmed to individual areas, based on each area's intended usage, to create appropriate lighting for any task and schedule.

**Tunable White.** Enlighted allows color temperature and intensity to be adjusted, increasing occupant comfort and well-being through perceptions of color temperature. Warm-hued white light promotes a feeling of calm, while cool white hues increase alertness.

# Enlighted Energy Manager

**Intuitive Management.** The Enlighted Energy Manager is a lighting control system that’s not only brilliant, but easy to use. Its web-based graphical interface provides a one-stop console where operators can configure and control light fixture groupings and behaviors.

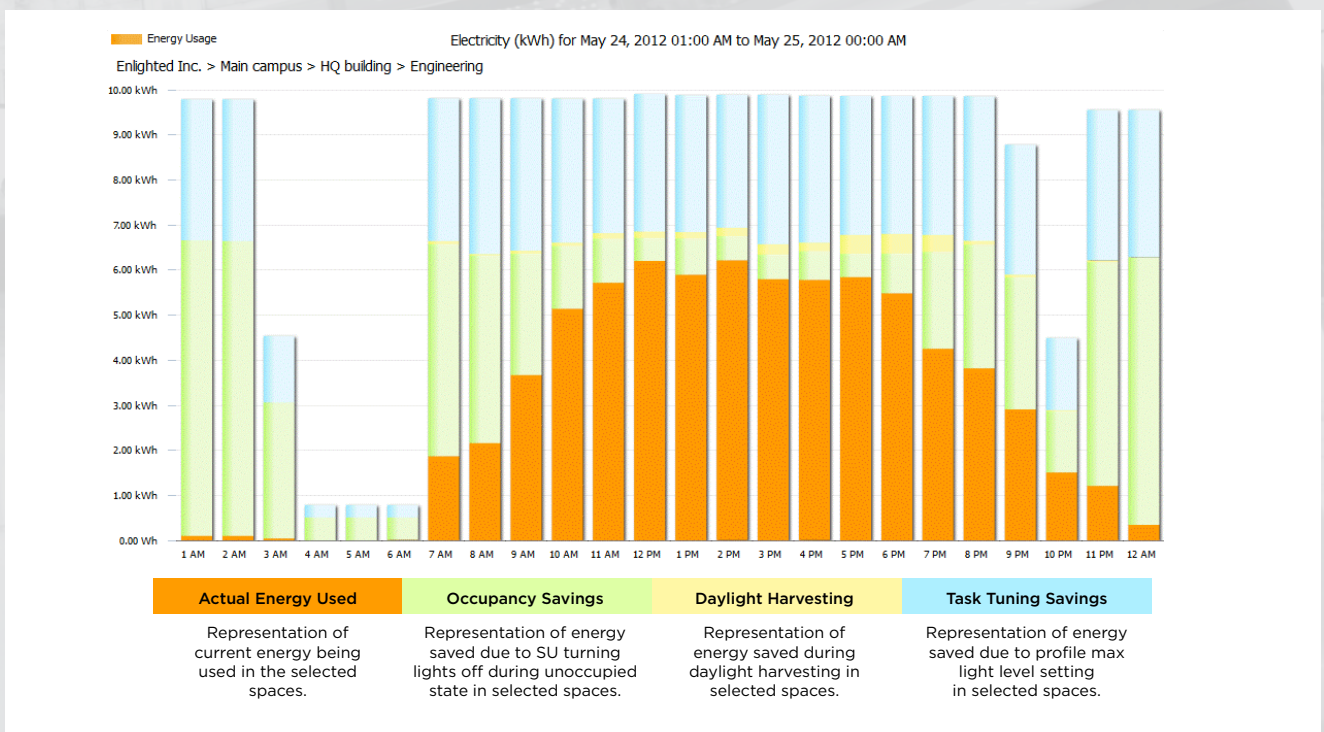

**Big Picture, Total Control.** Building managers can easily create pre-set groupings of individual lights, in a room or across a floor, and adjust as needed. Building operators can also track energy and usage patterns by floor, building, campus, or even portfolio-wide.

**Insightful Data.** Each fixture shares power metering data with the Energy Manager for storage and analysis, allowing the system to display total energy savings, and a breakdown of energy saving by technique—from daylight harvesting, to task tuning, to vacancy detection.

**Sustainable Results.** In a recent study, Enlighted demonstrated total lighting energy savings of 88% across a range of space types, sizes, and geographies, in over 328 U.S. installations. Of that, 50% of the energy savings came from switching to LED lighting, and an additional 38% came from intelligent lighting control.

**Sustainable Savings.** Occupancy data can also integrate with building management systems to drive adjustments to HVAC settings, providing additional energy savings of 35% or more. These savings help pay for the IoT platform and associated installation, while meeting your organization’s sustainability objectives.

## Energy Manager Reporting

## Compliance Made Simple

**Instant Compliance.** Quickly and easily installed into light fixtures, Enlighted sensors provide out-of-the-box compliance with energy use regulations. The sensors' capacity for vacancy detection, daylight harvesting, demand response, and energy savings reporting, makes it easy to meet and exceed guidelines.

**Responsive.** The Enlighted IoT platform includes demand response capabilities to automatically adjust energy use during times of peak demand, making buildings policy-compliant, eligible for rebates, and protected from penalties.

**Adaptive.** Enlighted software is easily upgradeable to address changes in building codes, such as the California Energy Commission's three-year updates to its Title 24 Building Energy Efficiency Standards. See our Title 24 Guidance at [www.enlightedinc.com](http://www.enlightedinc.com) for more information.

### Meets Key Title 24 Requirements

- **Section 130.1(b)** – Multi-Level Controls that support continuous dimming and shut off when spaces are unoccupied
- **Section 130.1(d)** – Automatic Daylighting Controls that adjust lighting according to ambient light levels
- **Section 130.1(e)** – Demand Response Controls to automatically reduce lighting energy use by at least 15 percent
- **Section 130.5(a)** – Service Metering to report on total electrical use

# Bringing Buildings into the Internet of Things

**Revolutionary.** Enlighted provides a cost-effective way to bring the leading Internet of Things architecture to an entire building, or portfolio of buildings, and become prepared for the IoT future.

**Transformative.** Enlighted is the world's most advanced Building IoT platform. It changes the way buildings operate, and provides never-before available data about what's happening in the building.

**Elegant.** Our breakthrough sensor technology is packed into individual digital units that are compact, beautiful, and easy to install.

**Extensible.** With software upgradeable sensors that capture and stream deep data to the cloud, new applications and insights become possible. A future-proof platform, it's ready to install today.

**Open.** The Enlighted IoT platform is open for innovation, providing data APIs and real-time occupancy information to customers and partners to develop their own apps, such as Bluetooth-based wayfinding, conference room management, and desk hoteling solutions.

## Building IoT Software Apps

The Enlighted sensors capture a vast repository of data that powers Enlighted IoT software apps. The Space app creates rich visualization and analytics about building usage and motion patterns. The Where app provides indoor real-time location services for asset tracking and process optimization, and more.

# Three Configuration Options for Lighting Control and Building IoT

A building's requirements and occupant needs change over time. Enlighted offers sensors with three tiers of capabilities that let building owners and occupants select the optimal tier for their immediate needs, then upgrade to additional capabilities as needs evolve.

**Enlighted One.** Enlighted One's easy-to-install, wireless room-based lighting control solution saves time and reduces installation costs. It can be upgraded to Connected or IoT offerings at any time.

**Enlighted Connected.** Enlighted Connected adds Energy Manager, with advanced networked capabilities for customizable lighting profiles and scenes, plus the ability to measure and report energy usage and savings, and connect to BMS systems through BACnet. Enlighted Connected is easily upgradeable to Enlighted IoT.

**Enlighted IoT.** Experience the full power of the Internet of Things with the world's most advanced IoT platform. Enlighted IoT unlocks capabilities to support Bluetooth-based asset location services, IoT-powered space planning, and APIs to connect to third-party ecosystem solutions such as Comfy and Teem.

Capabilities <sup>1</sup>	Enlighted One	Enlighted Connected	Enlighted IoT
Motion and Switch Groups	✓	✓	✓

<sup>1</sup>Capabilities may require purchase of additional products and services.

Choose the best Enlighted option for now, and for the future.

## About Enlighted

Our flexible, extensible infrastructure allows our customers to run responsive organizations, while enhancing the occupant experience, improving productivity, and increasing operating efficiencies. The infrastructure pays for itself through lighting energy savings.

Installed in more than 210 million square feet of real estate worldwide, Enlighted works with the world's top companies, including AT&T, Google, NHS, Intel, JP Morgan Chase, Uber, and more. Enlighted also has strong partnerships with all major driver and fixture OEMS.

Founded in Silicon Valley in 2008, Enlighted was acquired in 2018 and is part of Siemens Smart Infrastructure.
